tidverk

Call timer on the iPhone Action button

Press and hold the Action button when the phone rings – Tidverk opens and the call timer is already running. When you hang up, press and hold it again – the timer stops and you choose the client and project. Takes 2 minutes to set up.

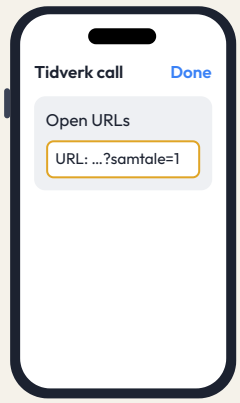

Get the address: `Tidverk › Settings › Calls › Copy address`

It is your own Tidverk address with ?samtale=1 at the end. Copy it from there so it is exactly right.

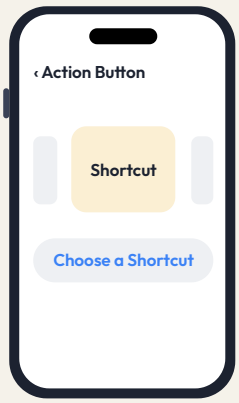

1 Create the shortcut

Open the **Shortcuts** app, tap **+** and search for **Open URLs**. Tap it to add it.

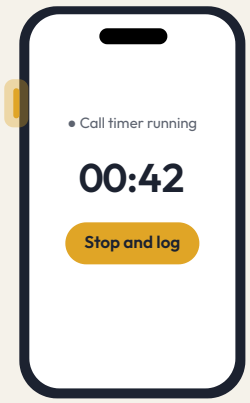

2 Paste the address

Tap the **URL** field and paste the address. Tap the name at the top, call it **Tidverk call**, then tap **Done**.

3 Put it on the button

Settings › Action Button. Swipe to **Shortcut**, tap **Choose a Shortcut** and pick **Tidverk call**.

4 Try it

Press and hold the Action button: Tidverk opens and the timer runs. After the call, **press and hold it again**: the timer stops and you choose the client and project.

No Action button?

- The Action button is on iPhone 15 Pro and newer.
- **Other iPhones:** Settings › Accessibility › Touch › Back Tap › Double Tap › **Tidverk call**. Then double-tap the back of the phone.
- **Siri:** say “Hey Siri, Tidverk call”.
- **Android:** touch and hold the Tidverk icon on the home screen and choose **Start call**.

Good to know

- The shortcut opens Tidverk in **Safari**. The first time, you may need to sign in there.
- The timer counts from the moment you press the button – also while you sign in.
- Two presses within 10 seconds count as one, so an accidental double press does not stop the timer. If the timer has been running for more than an hour, Tidverk asks whether you forgot to stop it.
